

How IoT is going to Transform

THE TRAVEL INDUSTRY

With technology becoming more and more seamless, travelers are primed to benefit immensely from the Internet of Things (IoT). Navigating across airports or check in to hotel rooms through keyless technology, life promises to be much easier for the new age traveler

THE AIRLINE INDUSTRY AND IOT

IoT can help manage passenger movements, measure journey times, deliver gate reminders on smartphones, track luggage, and locate travelers in emergency situations.

Airlines getting ready for IoT

IoT will present clear benefits in the next 3 years

Our organization understands the concept of IoT

IoT presents clear benefits today

We have budget allocated for implementation of IoT

% of airlines planning to leverage beacons to enhance apps

THE HOTEL INDUSTRY AND IOT

IoT will allow guests to use their smartphones to unlock doors, adjust lighting and temperature and control other connected devices. Hotels will be able to use it to optimize power consumption, track technical issues & send updates to technicians

CHALLENGES OF IOT

Some challenges of IoT might be things like hackers getting access into a user's network and controlling devices, customers dealing with massive amounts of data, and for suppliers to update each and every device through the internet
